

Breast - Breast Reconstruction

Introduction

The Covid pandemic has had a significant impact on the NHS ability to provide routine elective services. We recognise that patients are waiting longer than we would all like and it is not always possible to identify when treatment will take place. This document provides you with information on how you can support yourself while waiting to attend the hospital.

Guidance for Patients

The breast team deal with the diagnosis and management of breast related conditions that require surgical intervention. The breast team involves the treatment of children, adolescents and adults, and the management of anxious and medically complex patients

Breast reconstruction is surgery to make a new breast after removal of the breast or part of the breast. The aim is to make a breast of similar size and shape to your original breast. But they won't be identical.

Types of reconstruction

The main ways of making a new breast include:

- implants to replace all or some of your breast tissue
- using tissue taken from another part of your body (autologous or "flap" reconstruction)
- using your own tissue and an implant

Your surgeon will talk to you about the different types of reconstruction. They may not all be suitable for you. They aim to match your other breast as much as possible.

They can show you pictures of different types of breast reconstruction. You can see how the reconstruction looks straight after surgery and several months later.

After reconstruction surgery you might consider more surgery to:

- create a new nipple (a nipple reconstruction)
- change the shape of your other breast to match

Guidance for Patients

In preparation and to aid recovery after reconstruction surgery you should do the following things before your operation.

Stop smoking

Smoking can damage blood supply to tissue. It can also increase your risk of getting an infection. If tissue is taken from your tummy (abdomen), smoking increases the risk of hernia.

Maintain a healthy weight

My Planned Care Patient Information Platform

There is an increased risk of complications from an anaesthetic if you are overweight. Ask for a referral to a dietitian if you would like to lose weight before the operation.

Keep physically active

It can be useful to do sit ups if tissue is going to be taken from your tummy (abdomen). You could aim to build up to 30 sit ups a day. Talk to your doctor or specialist nurse before starting any exercise.

What should I do if my health is deteriorating?

Urgent Health Advice

For urgent health advice about physical or mental health, when it's not an emergency, please call 111 from any landline or mobile phone. You can also visit www.nhs.uk. The NHS 111 service is available 24 hours a day, seven days a week.

Life Threatening Emergencies

For something life threatening – severe bleeding, breathing difficulties or chest pains – please dial 999.

GP surgeries are still open

GP practice staff are also helping patients to manage their conditions at home while they wait for hospital appointments.

GP surgeries are still open and are working differently to how they did before the COVID-19 pandemic and GP practices continue to make best use of telephone, online and video consultations. Face-to-face appointments are still being given to those who need it.

When you phone or use an online form to contact your GP surgery to make an appointment, you will be asked some questions which are designed to help staff guide you to the most appropriate clinical person to help you with your condition. This could be a nurse, clinical pharmacist, physician's associate, GP or paramedic.

Contact Us

In some areas, we are experiencing a significant backlog following our response to the Covid-19 pandemic. We are doing everything we can to reduce this backlog including putting on extra clinics and theatre lists and opening additional sites to offer these services. We have also increased the ways we can offer appointments including offering more video and telephone appointments (as well as face to face appointments where appropriate).

Please can we request that you **do not contact your GP practice about waiting times**, as they do not have access to this information.

If you have any concerns or questions please use the contact details on your hospital letter, or if you do not have a letter with these contact details please contact our [Patient Advice & Liaison teams](#).

Keep Moving

Reducing your weight and getting active are two of the most powerful things you can do for your body and for your mind. Extra weight places additional strain on your lungs and heart, making it harder for the body to cope with surgery and respond to diseases, including COVID-19

Eating a healthy diet will help you get fit and recover quicker after surgery. Being a healthy weight also reduces your risk of blood clots and wound infections afterwards.

Improve Your Health

The COVID-19 pandemic has affected everyone which has caused a lot of people to think more seriously about their health. If you have decided this is the right time for you to make changes check out

www.nhs.uk/live-well and www.nhs.uk/oneyou/

They can also provide some inspiration for you and your family. The Trust has access to many resources which may help you in making healthier choices, these can be accessed [here](#).

Good Mental Health

Mental health issues will affect 1 in 4 people at some point in their life. Although FHFT does not itself provide urgent mental health specialist services, we are keen that you can access help and support when you need it. Please visit [FHFT website](#) where you can access links to Mental Health support in the local area.

Ongoing health conditions

About 15 million people in England have an ongoing health condition.

Long-term conditions or chronic diseases are conditions for which there is currently no cure, and which are managed with drugs and other treatment, for example: diabetes, chronic obstructive pulmonary disease, arthritis and hypertension (high blood pressure).

If you are living with one of these ongoing health conditions, there are many ways in which you can [look after yourself](#).
