

## Orthopaedics - Knee Replacement

### Introduction

The COVID-19 pandemic has had a significant impact on the NHS ability to provide routine elective services. We recognise that patients are waiting longer than we would all like and it is not always possible to identify when treatment will take place. This document provides you with information on how you are able to support yourself while waiting to attend the hospital. The guidance has been written by clinicians who are responsible for your care.

When you are waiting for further treatment it can sometimes feel like a long wait. The information and advice here is aimed at helping you manage that wait so you arrive for your appointment in the best possible physical and mental health.

The NHS has limited resources which means that we are unable to treat you as quickly as we would like. Each healthcare provider has to consider the type of help you need, how quickly you need treatment, the best course of action to help you and when and where you can be seen.

The process of sorting patients based on their individual needs is called prioritisation. The system of prioritisation is applied consistently across the NHS to help us to decide the order in which patients receive their treatment. This is essential to ensure that we provide care based on need. The system means that care is delivered in the fairest way possible.

Once a referral has been made from primary care to secondary care, the specialist team conduct assessments and then agree with you on the right course of action. At this stage, the urgency will be assessed. If you have a long-term health condition, for example, you may need treatment faster than someone without.

### Guidance for Patients

It is important that while you are waiting for your surgery you remain as active and as medically fit as possible. If you have any long-standing conditions such as high blood pressure you should get this reviewed at your Doctor's surgery to make sure it remains well controlled. This will also help prevent any unnecessary delays when you come for your pre-operative assessment. Maintaining a well-balanced diet is also important, as is reducing any excessive weight that may be impacting on your general health. If you are a current smoker it would be advisable to seek support to help with stopping, advice can be found at your local pharmacy or Doctor's surgery.

Support regarding losing weight, getting active, drinking less or quitting smoking is available from Live Well Dorset – register online at [livewelldorset.co.uk](http://livewelldorset.co.uk) or call on freephone 0800 840 1628.

## **My Planned Care Patient Information Platform**

### **What should I do if my health is deteriorating?**

If you experience an increase in pain, inability to weight bear on this limb or a significant reduction in mobility, you should in the first instance contact your General Practitioner for review and advice. GP surgeries are still open and are working differently to how they did before the COVID-19 pandemic. GP practices continue to make best use of telephone, online and video consultations. Face-to-face appointments are still being given to those who need it.

#### **Urgent Health Advice**

For urgent health advice about physical or mental health, when it's not an emergency, please call 111 from any landline or mobile phone. You can also visit [www.nhs.uk](http://www.nhs.uk). The NHS 111 service is available 24 hours a day, seven days a week.

#### **Life Threatening Emergencies**

For something life threatening – severe bleeding, breathing difficulties or chest pains – please dial 999.
