

## Urology – Rigid Cystoscopy

### Introduction

The Covid pandemic has had a significant impact on the NHS ability to provide routine elective services. We recognise that patients are waiting longer than we would all like and it is not always possible to identify when treatment will take place. This document provides you with information on how you can support yourself while waiting to attend the hospital.

### Guidance for Patients

Your Urologist has recommended rigid cystoscopy; a procedure to pass a telescopic camera through the water pipe (urethra) into the bladder for inspection under general/regional anaesthetic. Occasionally, there may be a need to stretch and dilate your urethra if this is tight. If necessary, we may also take biopsy of abnormal area and cauterise it.

Common reasons for having a rigid cystoscopy:

- To inspect water pipe and bladder in patients who have blood in urine or waterwork symptoms including recurrent infection
- If you are on bladder surveillance with history of superficial bladder cancer

It is important that while you are waiting for your procedure you remain as medically fit and active as possible.

If you have any long-standing conditions such high blood pressure or diabetes you should get this reviewed at your doctor's surgery to make sure it remains well controlled. This will also help prevent any unnecessary delays when you come for your pre-operative assessment. Maintaining a well-balanced diet is also important, as is reducing any excessive weight that may be impacting on your general health. If you are a current smoker it would be advisable to seek support to help with stopping. Alcohol consumption should be within accepted limits.

You can take your regular medication unless told otherwise. If you are taking clopidogrel, warfarin or any other medication that thins the blood, you must inform your urologist or the pre-assessment team, as they will likely need to be stopped prior to the procedure.

It is recommended that you take regular exercise (20 minutes per day until you are short of breath, increasing a bit at a time). Take a brisk walk or consider an exercise bike.

Support is available at **Healthy Cornwall** to help you with:

- Weight management
- Healthy eating
- Stopping smoking
- Physical activity

# My Planned Care Patient Information Platform
