

OPHTHALMOLOGY – Cataract Surgery

Introduction

The Covid pandemic has had a significant impact on the NHS ability to provide routine elective services. We recognise that patients are waiting longer than we would all like and it is not always possible to identify when treatment will take place. This document provides you with information on how you can support yourself while waiting to attend the hospital. The guidance has been written by clinicians who are responsible for your care.

Guidance for Patients

Cataracts are when the lens of your eye, a small transparent disc, develops cloudy patches. Cataract surgery involves replacing the cloudy lens inside your eye with an artificial one.

While you are waiting for your surgery it is important to stay as healthy as you can both physically and mentally. That will help you get the best results in the long term. If you have any long-standing conditions such as high blood pressure you should get this regularly reviewed at your GP surgery to make sure it remains well controlled. This will also help prevent any unnecessary delays when you come for your pre-operative assessment. Maintaining a well-balanced diet is also important, as is reducing any excessive weight that may be impacting on your general health. If you are a current smoker or drink heavily, it would be advisable to seek support to help with stopping.

The NHS website has lots of tools and support to help with the above, all of which are good for your health generally, but if you are due to have an operation, they can also help you to recover more quickly from it.

For help and support with losing weight visit: www.nhs.uk/better-health/lose-weight/

For advice on eating well visit: www.nhs.uk/live-well/eat-well/

For help and support with getting or keeping active visit: www.nhs.uk/better-health/get-active/

For help and support with quitting smoking visit: www.nhs.uk/better-health/quit-smoking/

For help and support with drinking less alcohol visit: www.nhs.uk/better-health/drink-less/

What should I do if my health is deteriorating?

Cataracts generally cause a gradually progressive reduction in sight. Any sudden reduction in sight or other symptoms such as flashing lights, floaters, a localised blind spot/shadow in your peripheral vision, distortion of your central vision (particularly when looking at straight lines) or redness or pain in your eyes would not be caused by cataract. If you experience any of these symptoms while waiting, you will need to seek help soon from your GP or optician or contact Eye Casualty 01823 344662
