

Gynaecology – Diagnostic Endoscopic Examination of Uterus and Biopsy - Hysteroscopy and Biopsy.

Introduction

The COVID pandemic has had a significant impact on the NHS' ability to provide routine elective services. We recognise that patients are waiting longer than we would like and that it is not always possible to say when treatment will take place. This document provides our patients with information on how you can support yourself while waiting for treatment at the hospital. The guidance has been written by the clinicians who are responsible for your care.

Guidance for Patients

Common reasons for having diagnostic examination of the uterus (Hysteroscopy) include:

- Abnormal uterine bleeding to identify causes such as polyps or fibroids within the lining of your womb.
- Postmenopausal bleeding.
- Suspicious lesion seen within the lining of your womb during ultrasound examination.

What should I do if my health is deteriorating?

If you feel you have symptoms similar to those described above, please contact your GP in the first instance.
